- The following buildings were erected in the summer of 1954 on the western tip of the canal at the mouth of the Vistula River in Nowy Port (Gdansk) through which all ships leaving the port of Gdansk sail:
  - a. Five single-story brick huts, 10 m. long, 4 to 5 m. wide, with normal windows and one door were constructed.
  - b. Cables of various thicknesses were laid between the huts.
  - c. The area is fenced-in with very high wire netting and barbed-wire on top. The only gate in the fence, on the southern side, is always closed except when opened by a civilian for cars entering the premises. There is no traffic in this region. After dusk no light can be seen in any of the windows on the south side.
  - d. Every morning several army cars with civilians arrive in the area of these huts. The cars then dive away; whether all of them leave or not is not known. No traffic was observed in the evenings.
- 2. A mast is visiable (see Sketch No. 1) in the northern part of the fenced-in area. Observation was carried out from the mast of a passing ship at a distance of just over one kilometer. The mast consists of two trellis-work iron poles connected by an arc. On top of the arc are two supports holding an inverted semi-spherical bowl. The bowl is made of wire mesh and inside it about 10 vertical rods can be seen. Because of the distance, it was impossible to ascertain if these rods are attached or if they form the framework of the mesh bowl. The structure is surrounded by fairly tall bushes and hard to see. On no occasion was the bowl seen in motion.
